Eaves ceiling attachment structure for construction site

MISAWA HOMES CO LTD 1998.02.23 1998JP-039871

Q45 (1999.09.07) E04B 9/02, E04D 13/158

Novelty: An extended installation section (30) is extends from an eaves ceiling body (20) to a building pivot (40) in the lower side. The flat-shaped eaves ceiling body passes along the horizontal direction between an eave front (70) and the building pivot. An L-shaped support holds the eaves ceiling body and is provided with an attaching section which is fixed to the building pivot.

Detailed Description: An INDEPENDENT CLAIM is also included for an eaves ceiling attachment method.

Use: For construction site.

Advantage: Simplifies attachment work since horizontal level of eaves ceiling can be adjusted. Simplifies ventilation of back of eaves due to extended installation section with L-shaped support which allows formation of vent opening.

Description of Drawing(s): The figure shows the longitudinal cross-sectional view of the eaves ceiling attachment structure.

Eaves ceiling body 20

Extended installation section 30

Building pivot 40

Eave front 70
